Project Abstract Submission Form

Sec No-6	Team No- T 6	Project Title- Lost and Found Items Tracker for Campus
-----------------	---------------------	---

1. Abstract

The **Lost and Found Items Tracker for Campus** is a web-based system designed to simplify the process of reporting, searching, and recovering lost items within a college campus. Students, faculty, and staff frequently lose personal belongings such as ID cards, mobile phones, wallets, keys, and electronic devices. Traditional methods, such as asking security personnel, checking notice boards, or posting in messaging groups, can be slow, unorganized, and ineffective.

The proposed system provides a centralized platform where users can report lost or found items by entering details such as item name, category, description, date, time, image, and campus location. An **interactive campus map** allows users to select and view the exact location where an item was lost or found. Users can search reported items using keywords, categories, locations, and status.

The system can also identify possible matches between lost and found reports based on item details, date, and location. Users can submit claims for found items, while an administrator can verify claims and update the item status as **Lost, Found, Claimed, or Returned**. Notifications can inform users about potential matches and claim updates.

The project aims to provide a simple, centralized, and efficient solution for campus communities while demonstrating the integration of **frontend technologies, backend services, database management, REST APIs, and location-based campus tracking**

2. Team Details

Roll Number(s)	Name of the Student	Signature
2520080021	Bondalapati Kavi Krishna Sai	
2520080017	Poloju Prajwal	
2520090074	Thumu Hemanth Kumar	

3. Frameworks / Platforms / Software Used

Frontend:

- **HTML5** – For creating the structure of web pages.
- **CSS3** – For styling and designing the user interface.
- **JavaScript** – For interactive and dynamic features.
- **Bootstrap** – For responsive and user-friendly design.
- **Leaflet.js** – For displaying the interactive campus map.
- **OpenStreetMap** – For campus map and location data.

Backend:

- **Java** – For application logic and processing.
- **JDBC** – For connecting the application with the database.
- **MySQL (SQL)** – For storing and managing users, lost/found items, locations, claims, and item status.

Development & Testing Tools:

- **VS Code / IntelliJ IDEA** – For project development.
- **Google Chrome** – For testing the website.
- **Git & GitHub** – For version control and source-code management.

Guide Name and Signature (remarks if any) _____
